

Hot Melt Adhesive Cleaners

BAMCleaners

We supply a selection of cleaning products that complement our hot melt adhesives.

BAMClean 1 is a fully refined paraffin wax cleaner for hot melt application systems and is supplied in pastilles.

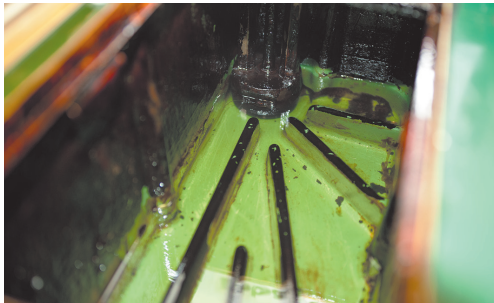

BAMSolve may be used for heavy duty contamination, surface cleaning and baked on char. **BAMSolve** is supplied in liquid form.

*BAMSolve must always be used undiluted and at room temperature. It should never be heated.

BAMClean 2 and **BAMClean 3** are cleaners that will remove build-up of adhesive and gels, it will also loosen charring in tanks and hoses.

BAMClean 2 is supplied in liquid and **BAMClean 3** is supplied in pastilles.

Hot Melt Adhesive Cleaners

Dirty, charred tank.

BAMClean 1 is a fully refined paraffin wax and is supplied in pastilles.

After over a year's continuous production, the tank has remained clean and clear - with no danger of nozzle blockages.

The photograph left shows a hot melt tank in a poor state – the result of a standard packaging hot melt being allowed to degrade. Not only does it look awful, but it will lead directly to nozzle blockages, production stoppages and increased costs.

Each cleaning product has been formulated to remove hot melt adhesives quickly and easily from tanks, hoses and production line surfaces. In doing so, they help customers to maximise machine efficiency, minimise down time and avoid internal contamination that can otherwise result in blocked nozzles and viscosity inconsistencies.

For your hot melt tank to remain clean, try using our BAMFutura products.

*Please refer to the cleaning instructions for each of the cleaners.
